WILLS'S CIGARETTES

The Camera.

The principle of photography was known as early as the 16th century. In 1802 Thomas Wedgwood wrote a paper on "An account of a method of copying paintings upon glass, and of making profiles by the agency of light upon nitrate of silver." In 1824 Daguerre commenced his experiments, and in 1839 Mr. Talbot published a method of producing prints from a negative. Dry plates were introduced in 1874, and in 1893 photographs in natural colours were produced by Lumière.
